

Curriculum Intent Plan

Subject: Citizenship

Overview

Students will be introduced to 3 categories that have various topics that will fall under them. These categories are Relationships, health and wellbeing and living in the wider world. They will develop transferable skill across these topics which will aid their day to day lives and how they conduct themselves now and in the future in the wider community. Through this subject we want our students to experience the benefits of physical learning about the wider world as well as embedding positive social and mental wellbeing through participation in sessions on relationships, living in the wider worlds and wellbeing, giving our student confidents in themselves.

Students will show mutual respect to teachers and will be ready to learn. Teacher will inspire learners through engaging citizenship lessons that are based around themes rather than disciplines. Students will build resilience through assessment and personalised plans will be produced to fill gaps in knowledge.

Traditional values

Using real 21st century life lessons, students will be able to analyse many types of situations and be able to access and develop their skills.

21st Century Skills

Students can access extra Citizenship guidance through the extracurricular enrichment lessons. Reinforcement of class knowledge and extra help can be provided where necessary.

Enrichment for all

Equality for all

All students have the opportunity to access computers on/in high spec facilities. Students are taught to the highest level to ensure all can achieve their potential. All students will access a variety of topics within lessons regardless of gender or ability.
