

Curriculum Intent Plan

Subject: Science

Overview

Students will be introduced to multiple themes that will be comprised of all three Science disciplines. The concept behind this is to build engagement and enjoyment and remove pre-conceived perceptions of Science. Students will experience a 'hands-on' approach to practical investigations, whilst also building key skills that are required for their understanding of core scientific concepts. The topics we will study will give students a firm foundation for their progression into GCSE, but also allow them access to exciting extra-curricular ideas and career paths. Students will become critical thinkers in Science and be able to use the skills of enquiry to design their own investigations based upon their own burning questions.
