

Curriculum Intent Plan

Subject: Textiles

Textiles Overview

From year 7, students will be introduced to multiple skills that will be comprised of designing and making. The concept behind this is to build engagement and enjoyment and remove pre-conceived perceptions of sewing, as well as provide application of design principles that will inspire students to continue learning at KS4 and beyond.

Students will show mutual respect to teachers and will be ready to learn. Teacher will inspire learners through engaging Technology lessons that are based around themes rather than disciplines. Students will build resilience through assessment and personalised plans will be produced to fill gaps in knowledge.

Using 21st century equipment in the Technology rooms, students will understand different concepts through high quality practical application. Students will be encouraged to question what is learnt as well as investigate how to carry out practical skills.

Traditional values

21st Century Skills

Students can access extra STEM activities through the extracurricular enrichment lessons. Reinforcement of class knowledge and extra help can be provided where necessary.

Enrichment for all

Equality for all

All students have the opportunity to access state of the art equipment in high spec classrooms. Students are taught to the highest level to ensure all can achieve their potential. Themes being taught to the classes are appropriate to all students.
